

HOW THE PUBLIC IS IMPOSED UPON

Beware of Frauds.

For the Sake of Profit They Will Sacrifice Principal, Health, Etc.

Unscrupulous dealers are trying to sell ordinary Glauber Salt or a mixture of Seidlitz Powder as "Artificial Carlsbad Salt," "Sprudel Salt," "German Salt," or "Improved Carlsbad Salt," and under other similar names. The Natural Remedies of Carlsbad cannot be imitated.

"What Nature makes man cannot improve." Artificially made wines will never replace the natural juice of the grapes. Neither can the natural waters of Carlsbad, nor the Carlsbad Sprudel Salt be replaced by the cheap substitutes offered to a gullible public for the sake of the larger profit made thereon, by these unscrupulous dealers.

No one would buy artificial wines knowing why. Why buy the imitations of the Carlsbad products, when your health is at stake? The Carlsbad Sprudel Water is a specific for all diseases of the stomach, liver and kidneys, and has been used with great benefit by hundreds of thousands of people. The Carlsbad Sprudel Salt, which is evaporated from the Sprudel Water at Carlsbad, is an excellent aperient, laxative and diuretic in an alternative and eliminative remedy, which dissolves toxicities, always irritates, as most cathartics do. The summer months when plenty of outdoor exercise can be had, are the most desirable for the "Carlsbad Cure." Use the imported Carlsbad waters, or if it is not convenient to use the waters, or when a more decided laxative effect is desired, use the Carlsbad Sprudel Salt.

Insist upon the genuine, which is imported direct from Carlsbad, and must have the signature of Eisner and Mendelson Co., Sole Agents for the U. S. 152 & 154 Franklin St., New York, on every bottle.

GENERAL NEWS OF INDUSTRIES

The anthracite coal agents at their meeting in New York yesterday advanced prices 15 cents per ton to \$3.65 for broken and egg, and 25 cents per ton to \$4 for stove and chestnut. These prices are 35 cents lower than last year on broken and egg, and 25 cents per ton on stove and chestnut. The next meeting will be held June 15. The output for June was fixed at sixty per cent of the capacity of 2,700,000 tons. In June 1890 the production was 4,115,000 tons and 1892, 3,891,807 tons. Western prices were advanced 25 cents per ton for broken, egg, stove and chestnut.

According to a long article in the Philadelphia Press, there will be no foreclosure on Reading properties, as predicted, for stays have already been taken that will prevent any such move, and within a few months, or at the close of the summer, the Reading company will be taken out of the hands of the receivers, and for at least five years the affairs of the company will be conducted by the present management. To do this it will require about \$20,000,000, all of which has been promised. Most of the money is to be raised by the New York committee of general mortgage bondholders, although quite a respectable sum is to be furnished in this city.

The receivers' plan, which was put out last year, called for the funding of the general mortgage coupons for a term of five years; the new plan calls for the funding of the general mortgage coupons for three years, but for making this concession the holders of the general mortgages are to have representation on the board of managers. There will also be a voting trust, which will keep the management intact for five years at least. To show how much in earnest the New York committee are, especially the Occitt committee, the Reading Railroad company is now securing all the money it wants from them to meet its obligations. Besides this, the Occitt committee has loaned the receivers the money to meet all the obligations due on June 10.

It is further stated that a syndicate of European and American capitalists has made a proposition to the Reading Railroad company, through the receivers, to operate its coal mines. The offer provides for the payment of all interest on the coal and iron bonds, the payment of a royalty on every ton of coal mined, and the payment of cash to the railroad company on all tolls and freights, in transporting the coal to the market. It is said the negotiations are now in progress, and if they are concluded to the satisfaction of the syndicate, new and improved machinery will be placed in the mines, and the output will be considerably increased from certain large tracts, and the mines that cost nearly as much to run as the coal that is received for it will for the time being be abandoned, more attention being paid to the mines in which the coal can be the most easily obtained.

A New York dispatch says: Chief Engineer Harry Lange and his assistant, Otto Bembel, of the Hamburg-American freight and immigrant steamship Grims, which arrived on Saturday from Hamburg, believe that there soon will be a revolution in the system of generating steam on the big liners. The first experiment with the new method was tried on the Grims on her voyage hither. It was absolutely successful, the engineers declare, and they say that the twin-screw speeders of the Hamburg line doubtless will adopt it. The invention is simply a furnace so constructed that the calorific in all the gases are wasted through the funnels of high-velocity ships and all the coal particles in the smoke are utilized. Passengers on the after promenade may no longer get smoke or fine cinders in their eyes. The labor of the stoker may be somewhat lessened, and what is most important to the steamship companies, a saving of about 30 per cent, will be effected in coal if the Grims' trip is an example of what a bigger and faster ship can do. This would mean that the Paris, of the American line, would burn only 325 tons of coal a day instead of 325 tons a day, a saving of about \$200 a day, or \$1,800 a trip.

This view of the anthracite situation is reproduced from a Pittsburgh exchange: "The anthracite coal trade, like the bituminous trade, is at a standstill, though from vastly different causes. The high water throughout the anthracite region has flooded many of the mines, forcing a suspension of work. This with curtailed production for several months past, has produced a scarcity of hard coal. The Reading company has been compelled within

the past few days to decline orders. Out of forty collieries operated by the Reading only twelve are in condition to be worked. In the Lehigh region there has also been some enforced stoppage from mining, principally in the Hazleton district, where five of the best collieries are idle. In the Wilkes-Barre region the mines were not affected by the waters and are running as usual. A number of individual operators were also drowned out and forced to a temporary stoppage."

MINOR INDUSTRIAL NOTES.
There was a decrease in the Jersey Central's net earnings in April of \$162,991. The "best" slope at the Otto colliery, Pottsville, is flooded and work will not resume before next week.

For the week ended May 25, shipments from eighteen reporting Luzerne county collieries amounted to 49,614.01 tons. Net earnings of the New York, Susquehanna and Western for April were \$43,088, against \$39,327 for the same month last year.

Trountman & Company's Wadsworth shaft is now ready to resume operations, having been shut down for a month to make improvements.

Coal shipments over the Summit branch for the week ended May 13, aggregated 12,747.12 tons, and for the week ended May 19, 8,304.93 tons.

Coal shipments over the Norfolk and Western have increased to such an extent that the company's motive power is said to be inadequate.

President Joseph S. Harris, accompanied by several expert mining engineers, has just returned from an inspection of all the Reading collieries.

Gross earnings of twenty-five roads for the third week of May decreased 17.55 per cent, and sixty-nine roads for the second week in May decreased 18.1 per cent.

The Minnesota supreme court reverses the decision of the lower court, and holds the anti-scalper law as valid. This will drive ticket scalpers out of Minnesota.

American locomotives have been adopted as the standard for Japanese railroads. In numerous tests American engines showed their superiority over those of all other nations.

James E. York, vice-president of the Irons Structural Steel company, explained the new method of rolling steel shapes, at the social meeting of the Scranton Engineers' club, last evening.

The Reading railroad system reports that its coal shipments (estimated) for the week ended May 26 were 121,000 tons, of which 10,000 tons were sent to Fort Richmond and 18,000 tons to New York waters.

W. L. Tiffany, of Wilkes-Barre, has been appointed station agent at Mountain Park to take effect June 1. A. F. Hitcher, of Plymouth, was yesterday appointed month ticket agent for the Valley railroad. The office is a new one.

About 150 yards of water must be pumped out of the Silverton slope, near Livelyville, before the plant will resume work. A pair of monster hoisting engines have been placed in position and the work of elevating the water in tanks has begun.

In his report, now in preparation, Mr. Rice will not go over the old ground in connection with the McLeod deal, but will confine himself chiefly to a review of some contradictory statements alleged to have been made by the present Reading management.

Coal Freight Agent Cresswell, of the Erie railroad, reports that the stock of soft coal on his road is very low, and other lines are making similar statements. The Lake Shore, it is reported, has given notice of soft coal at all the coal that comes into its hands.

The total number of industrial employees idle as a result of coal scarcity is placed at 33,000, and the total number idle owing to the strike, which now appears likely to fail is 210,000. In other industrial lines 25,000 men are reported idle as a result of strikes, making the total number now idle 253,000.

Pardee & Company, of Hazleton, issued orders on Saturday to work double shifts in their No. 3 colliery. A night force of miners have started in and the colliery works to its fullest capacity. The demand for anthracite is growing daily, as nearly all the coal at tide-water has been consumed since the beginning of the soft coal strike.

The company of Pittstonians who have been buying coal on a tract called the Pittston township, have suspended operations for the present, owing to a lack of funds to prosecute the work. They have bored three holes in the land, and in each place will send small veins of coal. The boring machines have been removed from the grounds, and the company's holdings sold—Gazette.

The Pennsylvania railroad reports that the quantity of coal and coke originating on and carried over its line east of Pittsburgh and Erie for the year so far has been 5,925,223 tons, compared with 5,411,412 tons in the corresponding period of 1893, a decrease of 5,438,819 tons, of which 4,485,348 tons were coal, a decrease of 1,651,359 tons.

The Erie, Erie, formerly employed in the machinery department of the New Jersey Central, is the master mechanic of the new railroad from Wilkes-Barre to Stroudsburg. Other officials of the road are Jonathan E. Tucker, engine dispatcher, located at Yatesville; William Bossert, in charge of engines, also at Yatesville; J. Newton DeWitt, in charge of the road at Newton; Joseph Reynolds, car department; and George W. Morris, general foreman of the car department.

DIFFERENCE IN PEOPLE

Why Some Are Fat While Others Are Lean.

THIS IS VERY INTERESTING

No Matter to Which Class You May Belong You Need to Know What Follows.

What makes some people plump and fleshy and others thin and bony? Is the human body thin and shaped in an inviolable mold? And what strange effects this difference produces. Beauty always demands curves—it never allows angles. A woman may be thin and graceful but not thin and beautiful. With men the question of flesh, critically speaking, is of less importance; yet it may be of a great consequence in other respects. To much fat is a burden—too little is also a disadvantage. How can we strike the golden mean? If, indeed, we can strike it at all. With the Turks fat is the standard of beauty, and with all nations a reasonable amount of it is the measure of health—in animals and in men. But the tendency seems to be the wrong way just now. There is a vast number of gaunt, pale, thin people; people manifestly under the proper size and weight. Many of them are actually emaciated yet not markedly suffering from recognizable disease. Most of them eat heartily—some of them voraciously. Still they remain thin—sometimes, especially so. Commonly they are very touchy and sensitive. They have nerves; they are full of nerves. They catch cold easily; they are upset by trifles; they lack force and courage. While not necessarily ill at all particular time they are the ready victims of disease and epidemic. They provide consumption with most of its subjects.

Now, if the eat why don't they grow fleshy? Why do they continue pale, thin and feeble? Because they do not digest and assimilate their food. Indeed their meals more often work harm than good. The torpid, uninduced stomach cannot do the work imposed on it. The contents ferment and putrefy and scatter poisonous acids all through the body, setting up gout, rheumatism, bronchitis, consumption and profound nervous maladies. The system grows feverish. Often there is nausea and vomiting; a sour distaste rises into the throat; there is distress before eating; deadness and distention of the abdomen, giddiness, bad breath, hot flushes followed by cold chills; yellow eyes and skin, languor and weariness not relieved by rest; aching of the back and limbs; great hunger alternating with a loathing of food; anxiety and nervousness about the future, and a variable nervous affection.

Nature needs help. So much is plain. But how can we help her? We must do her work for a short time. We must supply the body with some perfect food which will not require any digestive labor on the stomach. Can we do that? Until recently this auxiliary was sought among fat and oily remedies—especially cod liver oil. But these things failed for the reason that they are incapable of forming real and solid tissues. The false flesh they produce melts away more quickly than it comes. It gives no strength, no warmth. Millions of thin, pale, anemic, emaciated persons are the result of the delusive hopes of recovery they were led to indulge by the advertisements of these fat and oily compounds or emulsions; and how their air castles faded into gray disappointment.

No, the fats and oils won't do. Experience proves that. The only reliable remedy is not fat but a food, prepared in such a way that it requires no digestion, and pre-digested so as to require for the present no digestive action; a food capable of being absorbed into the blood and building up the body without putting a strain on the enfeebled digestive organs.

This is wonderfully done by the new preparation called Paskola, which is made on the latest scientific theory. When eaten (for it is a food, not a drug) it immediately becomes a flesh-building, life-giving element in the blood, an increase of vitality, vigor and weight is felt at once, and the symptoms of the previous depraved, de-vitalized state pass away.

Yet Paskola is a true food, needs to be used for a short time only. It gives nature power to put herself to rights and then its work is done. The point is that it soon enables the stomach to digest any food, even strong meats. Then the patient may follow his appetite and consult his palate alone.

Under the nourishing power of Paskola the hectic flesh soon leaves the consumptive cheek, the skin assumes the hue of health, the night sweats cease, the cough dies away, and the emaciation is lost under a coating of solid, warm and normal flesh. Physicians already report brilliant results produced by Paskola in the digestive organs of patients with rich diseases, and employ it in place of stimulants—the old treatment. The patients stomach at once absorbs Paskola which keeps up strength until the disease is vanquished. Its usefulness in this direction is beyond estimate.

Of late years, pale, thin people, of both sexes, have come to be an increasing majority in this country. Young persons grow tall and slender, without breath or stamina, and perish as fast as they grow. The statistics of the throat and lung hospitals tell the story of their fate. They are born with brains and nerves, but without the most important arrangement of all—a complete digestive system. Yet the doctor keeps them going on stimulants for a while and they die.

FINANCIAL AND COMMERCIAL.

Stocks and Bonds.

New York May 29.—The dealings in stocks today amounted to 137,000 shares. In Sugar the stock is still sensitive to Washington rumors. The April statement of the Burlington and Quincy showed a surplus of \$40,328 against a deficit of \$98,515 for the corresponding period of 1893 and had a good effect on the Grangers and especially on the stock named. Reading was in better request on rumors from Philadelphia that the various bondholders' committees will get together in the early part of the month and that the assessment on the junior securities will be a small one. In the last hour there was a reaction of 1/4 to 1 per cent. on realizations, but at the close there was a recovery and the market left off firm in tone. Net changes show gains of 3/16 for the day.

The following complete table showing the day's fluctuations in active stocks is supplied and revised daily by Lath & Fuller, stock brokers, 121 Wyoming avenue.

RADWAY'S

READY RELIEF.

FOR INTERNAL AND EXTERNAL USE.

In using medicines to stop pain, we should avoid such as induce injury on the system. Opium, Morphine, Chloroform, Ether, Cocaine and Chloral stop pain by destroying the power of feeling. This is the most destructive practice; it masks the symptoms, shuts up, and instead of removing trouble, breaks down the stomach, liver and bowels, and, if continued for a long time, kills the nerves and produces local or general paralysis.

There is no necessity for using these uncertain agents when a reliable remedy like RADWAY'S READY RELIEF will stop the most excruciating pain quicker, without exciting the least danger, in either infant or adult. It instantly stops the most excruciating pains, always inflammation and curing congestions, whooping cough, croup, diphtheria, hoarseness, or other ailments of the throat, membranes, PUR SPRAINS, BRUISES, BRACED, PAINS IN THE CHEST OR SIDES, HEADACHE, TOOTHACHE OR ANY OTHER PAIN, a few applications so like magic, causing the pain to instantly stop.

Malaria,

Chills and Fever, Fever and Ague Conquered.

There is no remedial agent in the world that will cure Fever and Ague, and all other Malarial, Bilious and other Fevers, aided by Radway's Pills, so quickly as Radway's Ready Relief.

RADWAY'S

PILLS,

For the cure of all disorders of the Stomach, Liver, Bowels, Kidneys, Bladder, Nervous Diseases, Headache, Constipation, Costiveness, Indigestion, Dyspepsia, Biliousness, Fever, Inflammation of the Bowels, etc. Files and all derangements of the Internal System. Purely Vegetable, containing no mercury, minerals or DELETERIOUS DRUGS.
